X, Y, Z. A 3D reference plane that determines the axis along which offsetting happens in two dimensions. When using the lnus X,Y, or Z planes for offsets, the Z axis is along the axis of the path (typically the X-axis when you are offsetting along a path). Front-facing/back-facing. A front-facing face is one that is bound to the model. It faces the viewer of the model. A back-facing face is a face of a face that is bound to a face. It faces away from the viewer of the model. Dimensional draw The dimensional feature allows the authoring of the dimension styles by using attributes. This feature allows creating dimension styles using attributes rather than in the dimensions themselves. Attributes can be added to a dimension to change the appearance of the dimension and the method of viewing the dimension. For example, attributes can add colour, thickness and show/hide the dimension. Attributes can be used in any dimension style, but only in Dimensional Draw. Dimensional Draw is an option within Dimensional Style. When in Dimensional Draw, the authoring interface shows a grid of symbols, similar to that of a traditional drafting table. Dimensions are displayed as editable icons. Attributes can be added to any dimension icon. Dimensions that are made from non-dimension objects such as blocks are made available in the same way as dimensions made from other objects. Dimensions can be hidden or shown using an authoring tools. When hidden, the dimension shows as a line with the dimensions' endpoints. The dimension's line is thicker than other lines. When shown, the dimension shows as a dimension icon. The dimension's line is thinner than other lines. When the dimension icon is clicked, the dimension is shown. When the dimension icon is clicked again, the dimension is hidden. This enables the view of the dimension to change when the view is changed. Basic dimension styles Basic dimension styles contain the basic attributes for creating a style, but they can be extended to contain additional attributes. Once the basic dimension style is defined, it can be used to create an alternative style. Dynamic style. The Dynamic Dimension Style is the default style. It does not contain any attributes. It is used to display dimensions, draw, snap, and alignment tools. Abstraction. An Abstraction Dimension Style is a dimension style that is created by clicking the Abstraction icon on the toolbar. What's New In?

Excel importing: Many new users use Excel for communicating with the CAD software. Import data from Excel into your design and view it in the drawing. Access to data in other formats is planned for a future release. Markup: With the introduction of AutoCAD® MEP, 2D annotation is a cornerstone. View the latest annotation creation tools in AutoCAD® MEP. Supports native CAD/CAM software: MEP gives you the ability to annotate CAD drawings with dynamic 2D tools, such as handwritten notes, and digital marks, like stamps. With MEP, you can connect with other applications, such as Autodesk® Revit® and AutoCAD®, to create a complete communications environment. (video: 3:45 min.) Revit integration: With Revit integration in MEP, you can send your markups to Revit® and view them directly from the same tool. Generate Xrefs to link back to your original CAD drawings for greater efficiency. Simplified user experience: Microsoft Outlook® now has a new file type for AutoCAD® MEP files. Now you can work with your MEP files directly in Outlook and access them through the file type. Retention: Export to PDF from the drawing canvas, or place the drawing into the clipboard and use the Paste command. Drafting and designing: You can easily create your own templates for new drawings. A more detailed look at the changes included in this release. New Shapes: 2D and 3D polyline, arc, ellipse, circle, polyface, spline, torus, text, spline, and spline surface. New Tools: Convert to Mesh: Convert existing 2D or 3D objects to an independent array of connected line or polyline segments. Scatter: Create a circle at any location in a drawing. Relate: Display a diagram in the drawing window, edit and annotate the diagram and export it to another drawing. Design Elements: AutoCAD® MEP now includes two ribbon tabs: Design and Engineering. The ribbon tab, Design, includes the functions for drawing, annotating, and communicating, and the Engineering tab, includes the functions for annotating and engineering. The design ribbon tab is still accessible through the View tab's Design subtab.
