Geomatica is a tool for geospatial analysis and visualization of multispectral remote sensing data. This tool can be used to view, overlay, compare, analyze and calculate using multi-spectral remote sensing data from space. The tool also has the ability to open, view, analyze and calculate with multispectral data from ground-based sensors such as LIDAR, LiDAR, Hyperspectral, radar and imaging systems. It has an intuitive and well organized user interface with several tabs, options and menus. It is also a fully customizable tool that provides a user-friendly environment for all end users and

professionals alike. It's quite an extensive application and is easy to operate and use. Features: Data Sources Many different remote sensing data sources, both public and private are supported. Data can be loaded from: • GeoTiff/TIF format • raster/pixel datasets • Images • WebMaps • User-created geospatial data View and Analyze Geomatica includes 2D and 3D viewing and analysis tools, a histogram and RGB and color mapping and processing functions. Geomatica has the ability to open, view, analyze and calculate using multi-spectral remote sensing data from space. ground-based sensors such as LIDAR, LiDAR, Hyperspectral, radar and imaging systems. Generate high-resolution maps Geomatica includes the ability to create high resolution maps using linear or isometric display techniques from various data sources. For example, it can view and analyze LiDAR point cloud data. Geomatica also includes the ability to produce vegetation maps from LiDAR point cloud data using a classification algorithm. Apply a VRT Geomatica includes the ability to apply a VRT to images, vectors or raster datasets. A VRT is a transformation technique that is used to convert linear data to a 2D form. VRTs can be used in many different fields, such as

photogrammetry. Compose aerial images and aerial photography Geomatica can be used to view and analyze multi-spectral images including aerial images, aerial photography, satellite images, radar images, hyperspectral images, infrared images, LANDSAT images, aerial video and more. Geomatica can also overlay images on

## State of Origin II: Queensland look to seal series

Updated Queensland were just 18 minutes into their title defence when they lost star half-back Cooper Cronk for the rest of the season with a broken leg. It didn't take long for Australia's greatest State of Origin team to show just why it's the greatest State of Origin team of all-time. In Brisbane the Maroons came from behind to extend their Origin series to a decider, and while there will be huge questions over how the Blues lost last year's series, their players will be itching to take out the urn at Suncorp Stadium this year.

Key match-ups: If you're looking to

see how Sydney, Melbourne and the Central Coast will shape the series, then look no further than the first game on Sunday. It'll be the first time the Blues have hosted the Maroons at Allianz Stadium since their shock loss in 2014, and to have the urn at stake will be a huge psychological boost. But Cronulla's Trent Merrin and North Queensland's Justin O'Neill will be looking to spoil the occasion for the Blues and Queensland respectively. their shock loss in 2014, and to have the urn at stake will be a huge psychological boost. But Cronulla's Trent Merrin and North Queensland's Justin O'Neill will be looking to spoil the occasion for the Blues and Queensland respectively.

When will it happen: All games start at 7:10pm and will be broadcast live on Fox Sports.

Queensland: 1. Anthony Milford, 2. Blake Ferguson, 3. Aidan Guerra, 4. Jake Trbojevic, 5. Tautau Moga, 6. Jacob Lillyman, 7. Josh Papalii, 8. Greg Inglis, 9. Corey Oates, 10. Will Chambers, 11. Josh McGuire, 12. Cooper Cronk.

Interchange: 13. Tim Glasby, 14. Sam Thaiday, 15. Damien Cook, 16. Johnathan Thurston, 17. Matt Gillett,
