One is to browse the source code of a Linux distribution, another is to experiment with source code and to read good articles and books. The last way is to diggings. The second important part of the Linux community is the user community. An incredible number of developers can be found on the Usenet newsgroup `comp.os.linux.announce`, which can be checked at multiple locations. They are often very welcoming and will often explain how things work.

With the click of a button, you can terminate the locking processes and delete them from disk. However, please keep in mind that this application does not make it possible to delete any file on the system and that there might be other reasons why getting rid of the file is not allowed.
